Dear Executive Director Snow:

I urge you to ensure that CalFed puts forth and selects a new "Smart Alternative" based on restoration + conservation to provide high quality water for both wildlife + people in California.

The "Smart Alternative" would restore + protect watersheds + groundwater; maximize water efficiency before costly dams, reservoirs or a Peripheral Canal; use economic incentives to use water more efficiently + ensure conservation; and restore California's rivers, wetlands, deltas + bays as well as fish + birds.

I urge you to enter these comments into the formal record for your Draft Programmatic Environmental Impact Report and Statement.

Sincerely,

E. G. Seidenstein
