Lester Snow
Executive Dir., CALFED
1416 Ninth St.
Sacramento, Ca. 95814

Dear Mr. Snow,

In response to the revised CALFEC Plan, I voice my opposition to increase surface water storage in the Central Valley. The plan to raise Shasta Dam would flood parts of upper Sacramento and McCloud rivers. The proposed Sites offstream storage reservoir would call for huge water diversions from the Sacramento river. We need to use higher

752(2)

value and less water consumptive crops and install ~~for~~ water meters for agricultural and urban users to increase our water supplies.

We also need to remove Englebright dam, because they are obstacles to migrating salmon.

Ecological problems started by dams and diversions cannot be solved by building more dams and increasing diversions.

Thank you for your consideration. I look forward to seeing your response

Sincerely,

Steve Lotw
