Dear Mister ~~Snow~~ AUG 19 1999

Please de-emphasize the building of dams and emphasize more efficient use of water by urban + commercial agricultural users. More than just recreational + realestate benefits of keeping rivers running fully, the long term economic health of our system" the U.S. + CA. depends on it. I think it makes sense to pass on true costs of water use to consumers and not to subsidize "water thirsty" crops using public funds for private business. We need to get a little more creative, efficient, modern in our thinking + devise long term sustainability plans for water use in California. Thank you, Kaya Brown, MS, OTR
