Sir: JUN 12 1998 01046 6-4-98

This is to urge a long term solution (a "4th alternative") that limits agricultural waste by conservation and recycling water, and higher prices to encourage it. Agribusiness wastes water because it's too cheap (to them - we pay true cost). Less subsidized alfalfa would leave plenty of water for the estuary and wetlands. We know a lot more than 1% of agricultural water can be conserved. Some farmers are doing it.

Thanks for listening
