Lester Snow

I'm writing this letter to ask you to reconsider your Calfed plan. I agree with the overall Goal of the Plan but I don't see how building more dams will help. When you build a dam you kill a river or part of a river.

Please find a better solution such as expand conservation programs, Reclamation programs, less water consumption crops, and/or water meters for all agricutural crops. Please consider these options.

We can't solve ecological problems caused by dams & diversions by building more dams & diversions.
