AUG 1 3 1999 0174

Dear Rick Breitenbach,

I would like to voice my response to the CalFed's revised draft EIS/R.

Although the plan has some positive aspects, the following needs to be addressed.

① Conservation works. CalFed needs to thoroughly explore other methods to achieve water supply reliability before building costly and environmentally damaging new dams and reservoirs.

② Restoring adequate flows to the Bay/Delta should be CalFed's top priority.

③ Taxpayer dollars should not be wasted on unnecessary new subsidized projects.

④ Finally CalFed needs to base its future water needs on realistic water accounting, including potential savings from conservation.

Thank you

Jared Babula
