Dear Mr. Snow -

I am writing to you in response to the "Revised CALFED Plan" which includes raising the height of existing dams, as well as building new dams, to increase water storage capacities in the Central Valley.

I am seriously opposed to this Plan. Flooding Segments of Rivers and creating massive water diversion from the Sacramento River, in addition to the water we are already diverting is not the answer. Messing with Mother Nature in this way is not constructively using our resources and solving our problem. In addition, the long term negative effects on the environment and wild-life habitats could, and would, be devastating.

I urge you, and Calfed not to build more dams, and/or raise preexisting ones,

but rather to constructively expand water efficiency of our already existing water supplies.

I am totally in favor of Restoration projects you have in the Planning for increasing instream flows, not decreasing them, for our natural habitats for fish & birds, & wildlife, as well as non-polluting recreational sports, such as rafting, kayacking, inner tubes, etc.

Thank-You for taking your time in reading and considering my letter to you. Any response you may have will be welcome.

Sincerely-

Morissa Jennings
