My dear Governor Davis,

The draft of the Water Resources Plan for California's water resources future known as "CALFED BAY/DELTA" program, has come to my attention.

As a non-resident of your forward-looking state, it has struck me as a model which the rest of the country should adopt to protect each state's water quality, watersheds, fisheries and conservation which is my personal reason for writing you. I urge you to bend every effort to adopt and implement this sensible program which is designed to:

1. Increase efficiency in water use for seven years before considering new dams.
2. Restores rivers, bays and fisheries.
3. Improves water quality by enforcing limits on pollution.
4. Stops burdening taxpayers with costs of studies of new dams and reservoirs.

Sincerely,

Frederick Cezer
