T. Hannigan

6/15/99

Dear Mr. Hannigan,

I'd like to urge you to support the CALFED water program under proposal now. I strongly feel that we need to conserve and restore our natural waterways (the few that are left), rather than consider building more dams and reservoirs. The state is riddled with these already, and they have created many, many problems for fisheries, water quality, and the overall health of our natural environment. Please emphasize Water Efficiency for the 21st century, instead!

Thank you,
