To:

Governor Gray Davis

You can impact decisions being made about California's water future.
We need to take a 'smarter' approach through CALFED Bay/Delta's program, a plan for the next 50 years.

1. Investing in water efficiency
2. Restoring rivers, bays, fisheries
3. Improving water quality
4. Stops making tax payers pick up tab

Please don't be led by the developers and business interests who are only concerned about their $ and not the interests of future generations. We do not need to flood valuable habitat and remove water from our rivers. We need healthy rivers, abundant wildlife & ample clean water for families, farms & businesses.
