11-23-98

Dear Sir

Regarding Calfed's draft plan for future water use in the bay-delta, I strongly urge you to select the fourth "smart" alternative. This would be the best way to restore and protect our watersheds and groundwater for high-quality, reliable water and restore our fish, wildlife, rivers and other aquatic ecosystems.

Please fully consider the benefits of water conservation and increased freshwater flows before releasing your final environmental document.

Please reply!

Sincerely

Ken Dawdy
