

Table 1. Selection of Species-Assessment Variable Relationships to Include in the Impact Assessment: Reservoir Fishes

Species	Assessment Variables												
	Conveyance and Storage Components			Ecosystem Restoration Program									
	Water Quality Program												
	flow	reservoir drawdown	temperature	estuarine salinity	food availability	sedimentation	diversion	barrier	spawning habitat	rearing habitat	pollutants	fishing	hatchery production
rainbow trout		1	1								2	2	
largemouth bass		2						2	2		2		

Notes:

Response to CALFED Alternatives: **2** = priority relationship for the impact assessment
 2 = very important
 1 = may be important
