Bay Delta Board,

JUL 01 1998

Dear ~~Deputy Secretary Garamendi~~:

01774

Twenty-five years ago, the Clean Water Act declared our right to fishable, swimmable water.

Despite some progress, the heart of California's water system--the Bay/Delta--is still devastated.

I urge you to champion the following principles for a sound Bay/Delta solution: Definitely think "new" solutions

- ← \* maximize water conservation to avoid new canals and reservoirs;
- Businesses \* protect Delta and stream water quality and flows for
- cities clean drinking water; and are what we need for a cleaner
- suburbs \* share the water with the fish, plants, birds, and wildlife.
- Farms and more reliable water supply.

Thank you,  
new methods  
and more

In other words, peripheral canal + more reservoirs perpetuate lack of conservation and cause more problems.
