Dear Executive Director Snow:

I urge you to ensure that CalFed puts forth and selects a new "Smart Alternative" based on conservation and restoration to provide reliable, high-quality water for California's people and wildlife. The "Smart Alternative" would:

- \* ensure strong conservation programs and economic incentives to use our water more efficiently;
- \* maximize water efficiency before even considering costly new dams and reservoirs or a Peripheral Canal;
- \* restore and protect our watersheds and groundwater basins;
- \* restore California's fish, birds, wetlands, rivers, delta and bays.

Please enter these comments into the formal record for your Draft Programmatic Environmental Impact Report and Statement.

Sincerely,

*Kay C. Bloom*

*Water is even more crucial, now that weather patterns are unreliable. SF Bay, in particular, needs protection.*
