Comments:

IF the Number of LAWNS in urban areas could be reduced by planting native plants instead it should save a lot of water. I know someone who has mostly native plants and they hardly water at all. Native plants are used to this climate. Get rid of front lawns especially.

Comments:

In the parking lots - solid pavement should be replaced by pavement that allows the water to soak down at the site rather than being rushed to the gutter overloading the wastewater system thus causing pollution in nearby water sources. Quality of water is important - protect it - prevent problem
