Sacramento, CA 95814

Re: Final Programmatic EIS/EIR

Dear Mr. Ritchie:

I am a wine grape grower in Calveras County. I ask two things, and then shall comment on the document. The requests are:

- 1. Extend the period to look through the document and provide comments on the final EIS/EIR released July 21.** As a farmer I can't adequately review the thousands of pages in the document in the time allowed.
- 2. Hold public hearings to explain what you will do and the effects on us.** Many changes were made to the report, which the public needs to have an opportunity to understand and discuss. I fear that even after we review the document there will be a lot that we won't understand. Even though you may not believe you are obligated to tell us how the plan will affect us, it's the right thing to do.

**Comments:** I believe that in trying to protect the environment, the Cal-Fed plan actually will harm it instead. Taking thousands of acres of land out of production will change the face of California agriculture dramatically. It will have a huge impact on the environment, not to mention local economies. When the land in private ownership stops providing food, a tax base and wildlife habitat, what happens to that land?

The farm environment where wildlife has gathered will be forever changed. Those crops won't be grown. Many species now occupy the acres of farmland Cal-Fed proposes to take out of production. They are there because of the habitat provided by farmers and ranchers. History shows that the government has not done a good job of protecting and repopulating these species. Cooperative arrangements with landowners have worked better.

The Cal-Fed plan is flawed. I am disappointed that Cal-Fed and its agencies have turned a deaf ear to the more than 1,000 representatives of agriculture who attended your 16 hearings last year. Of the 800 people who spoke, most were farmers and ranchers and their families and neighbors. These people are stewards of the environment, managing land and water that produces food, wildlife and oxygen.

Sincerely,

Stuart Mast
