Stein Buer

From : Department of Water Resources

Subject: Annual Status Report, Interim North Delta Program
Studies for FY 1994-95

The attached annual status report provides background information and describes project activities completed under the Interim North Delta Program during FY 1994-95. It includes EIR/EIS technical studies, interagency coordination, and report preparation.

In addition, over the past several years the Section has initiated a range of long-term planning support activities such as land acquisition for borrow materials, mitigation, enhancement, and potential future facilities; coordinating planning other agencies affecting land use in the north Delta area; and measures to reduce fishery impacts.

These activities have generally focused on the Interim North Delta Program Study Area, shown in Figure 1.

This report does not include support activities for the BDOC and CALFED processes, although substantial staff effort was devoted to them and there is quiet a bit of overlap between the programs. During FY 94-95 support activities requested by BDOC staff were funded under WA 1466.
