Memo to: Chuck Vogelsang, CALFED Bay-Delta Program

From: Tom Wegge

RE: Recreation Resources Working Document

Chuck,

Enclosed are the worksheets that I used in the impact analysis. The hydrology ratings for the San Joaquin and Sacto River Regions reflect DWRSIM information, which is summarized by alternative and affected reservoir/river at the bottom of each page. The DWRSIM results reflect the approach that we discussed with Param in which the data are aggregated across all peak summer months (May through September). The data on fish and wildlife impacts and construction impacts comes from the Fish, Wildlife and Recreation Economics Technical Report prepared in November 1997.

I also looked at the Recreational Resources summary that you gave me. I had few editorial suggestions, which also are enclosed.
