Dear Water Quality Technical Group Member,

Enclosed is a **working draft** of the CALFED Water Quality Program Technical Report. The complete Water Quality Technical Report is being prepared for final distribution at the Water Quality Technical Group workshop on August 6. This draft does not contain the Appendices, final version of action strategies, existing programs, comprehensive research, assessment and monitoring framework, or watershed coordination strategy. ***Comments that have been received from stakeholders are being reviewed and will be incorporated in the August 6 version of the document.*** This is particularly relevant to all of you who submitted comments on the action strategies. We are sorry that they have not been incorporated into this version but we simply ran out of time and wanted to get a preliminary copy of the document to you for initial review.

We would appreciate your assistance in reviewing this draft for technical accuracy and completeness. Revisions or additions to the draft should be faxed to Carol Howe at 924-9102, by 10:00 AM Tuesday, August 5. Due to time constraints it would be most helpful if you submit exact wording or references that you believe should be included.

Particular help is requested to more fully describe the parameters of concern from the different beneficial use perspectives. Comments or information that does not get incorporated into this document will be considered during impact assessment and pre-feasibility work.

We apologize for the delay in distribution of this document and appreciate your assistance in making this an accurate and useful document.

Regards,

A handwritten signature in black ink, appearing to read "Rick Woodard", written over a light-colored background.

Rick Woodard  
Chief, Water Quality Program
