Subject: Flooding of islands to create wetlands

Just a reminder that you were going to mention the above work as a candidate priority study since it has program-wide impacts and directly addresses objectives in the ERP, WQP and water supply.

In developing such a proposal, Storage & Conveyance/WQP will collaborate with the ERP to make sure that water quality and ecosystem restoration objectives are addressed. Establishing a wetland coefficient for ET could be a part of such a study and enable important modeling to occur. We are having a Storage and Conveyance Workshop on November 24, 1998 where future informational needs to establish a wetland ET coefficient will be discussed.
