>Lenore remains ill so I did a quick review.

>Review of Water Quality Impact Analysis Documents

>Loading

>p13 The remaining selenium observed at Vernalis is probably from
>groundwater effluent to the river.

>p31 A supplemental analysis of the amount of Bromine reaching the
>export pumps from seawater is needed. Such an estimate is central to
>the evaluation of certain CALFED alternatives.

I have no comments on the sample impact writeup.
