MESSAGE: Rick,

Attached is the preliminary information on the technical team recommendations on the thru-Delta and dual transfer alternatives. I don't know if this will be of much help to you. The technical team has narrowed down the isolated facility to the 5,000 to 10,000 cfs range but we have been instructed to do a little more work looking at both 2500 cfs and 15,000 cfs.

Thanks for sending me the notes and the updated version of CMARP.
