Subject: Confirmation of approach to dealing with 4 northern reservoir sites

Joyce called and reminded me that I had agreed to email a summary of the discussion of reservoir site coverage from our 03/15/99 meeting at CALFED. I apologize for this very belated response. The following is based on my notes from the discussion:

** Per Ron Rempel, CDFG needs to know about more than just the inundation zone of the proposed reservoir sites. Information is needed about the area adjacent to the proposed reservoir sites for CDFG to be able to make a programmatic decision.

** The required information can be categorized into 2 types:

(1) Are there any fatal flaws in the 1-mile radius surrounding the proposed reservoir sites, based on vegetation maps and biologists' general familiarity with the areas?

(2) Is there an ability to conserve the species that occur in the inundation zone within the 1-mile radius surrounding the proposed reservoir sites? (i.e., are the habitat types within the 1-mile radius similar to the habitat types within the inundation zone?)

DWR N. District will gather the foregoing information for the 4 northern reservoir sites they are currently investigating. Existing species information that JSA has for the 4 northern sites should be sent to DWR N. District.

For the other reservoir sites, existing information should be gathered and provided to JSA.

MARTI: Please call me when you get a chance to follow up on this.
