**CALFED Bay-Delta Program Multispecies Conservation Strategy Technical Report:
Crosswalk of MSCS NCCP Habitat Types to Other
Community and Habitat Classification Systems**

MSCS User Guide: This technical report provides a crosswalk of the CALFED Multispecies Conservation Strategy (MSCS) NCCP habitat types to other commonly used community and habitat classification systems. The ability to translate NCCP habitat type designations into other designations is necessary to provide a common understanding among MSCS users of what communities are encompassed in each NCCP habitat. The crosswalk provides the basis for using existing community and habitat distribution maps and geographic information systems (GISs) of the MSCS focus area to analyze effects of CALFED and to develop area-specific implementation plans (ASIPs).
