

**POTENTIAL ADDITIONAL ASSETS FOR EARLY STAGE 1 IMPLEMENTATION
AS PER DEVELOPMENT TEAM MEETING 9/28/99**

ASSET	EXAMPLES OF HOW ASSET COULD BE APPLIED
Pumping to Storage <i>Eastern conj. use</i>	Pump groundwater to meet local needs; exchange groundwater for surface water at local level
Regulatory Flexibility	Flex Delta (X2) standards (opposition from environmental Community)
Flood Control	Modify flood control diagrams (downstream channel modifications) to increase potential for groundwater recharge and allow for more in-channel storage)
Water Acquisition in the Delta	Acquire water from in-Delta users to off-set potential impacts to water quality from other in-Delta actions
SWRCB Hearings	Complete process and allocation of responsibility for standards
SWP Contracts	Incorporate environmental sensitivities into SWP contracts
Monterey Agreement	Re-negotiate
CVPIA	<ul style="list-style-type: none"> • Complete PEIS and finalize AFRP; • Evaluate links between refuge water supply wheeling and other assets to increase flexibility • Shift some refuge water supply to fisheries
Intertie	Construct link between projects to increase flexibility (approximately 400 cfs)
Reoperation of Reservoirs	Incorporate reservoir reoperation into scenarios
Rice Field Flooding Program	Expand program to increase flooding, release water from fields later to increase benefits
