

Charge for DNCT

In preparation for evaluation of Asset Scenarios to be considered by WMDT the DNCT is to undertake the following tasks:

1. Improve the analytical process used to evaluate scenarios. This will include such things as extending the sequence of years to be evaluated from the 5 used in analyses to date to a 15-year sequence and upgrading the models used.
2. Working with the most applicable scenarios evaluated to date, explore options for improving benefits for all interests. The goal would be to compare how the system performs as assumptions change, to aid in structuring scenarios for consideration by the WMDT. Factors to be considered include how variations in sharing formulas, both by asset and by year type, and baselines affect benefits.
