

# Qualifications on Recommendations

- **No formal endorsements to implement any measure or groups of measures without qualification/mitigation/linkages.**
- **Results to date are preliminary and need further review. Further refinement of measures is necessary to fully evaluate their benefits and impacts.**
- **Water supply benefits are measured in terms of south of Delta deliveries. Impacts to other water users should also be assessed.**
- **Project specific environmental documentation may be needed on a parallel time line to the CALFED EIS/R ROD if early implementation is desired.**
