

Solution Option Categories

Each of the options listed above should fall under the following more general categories:

- 1) establishment of baseline data (for groundwater, applied water, storage, cropped acres)
- 2) prioritization of types of transfers based on acceptability and minimal potential impacts (i.e., intra-district, intra-basin, instream, out-of-basin)
- 3) defined process for market access (who gets to participate and how)
- 4) objective analysis of specific transfer proposals for determination of potential impacts
- 5) public participation and disclosure of potential impacts and planned mitigation
- 6) monitoring and verification of transfer quantities
