

ITF NSA #1 - RD 2124 (Nicholaus Farms)

Date Out For Review: 26-Mar-97

Report Submitted By: USACE

AGENCY	DATE COMMENT RECEIVED	COMMENT RECEIVED
USACE	27-Mar-97	The Reclamation District expressed an interest in a NSA. The District will address in the Project Information Report (PIR).
FEMA	28-Mar-97	No NSA.
EPA		
BOR	17-Apr-97	Not having done any detailed examination it would seem to be feasible to abandon levee and set it back. Report identifies two structures that should be relocated. One is a BLM structure. Coordinate with Nature conservancy. Unlikely BOR has money for this project.
FWS		
USGS		
BLM		
NRCS	4-Apr-97	NRCS might be able to assist the Corps in the NSA being investigated by the Corps in the PIR.
EDA		
NMFS		
CALFED	17-Apr-97	CALFED has identified the Consumnes as a high priority for floodplain restoration. The Consumnes is the only undammed tributary in the Delta. It is an irreplaceable source of sediment which can "naturally" rebuild shallow habitats along the Mokelumne River and in the North Delta. Several endangered species use habitats in the Consumnes floodplain and river. CALFED supports NSA for this project.
DWR	28-Mar-97	Need to enlarge flood carrying capacity in this area. Potential for set back levees. Work/coordinate with Nature Conservancy and CAL-FED as they have plans/properties in this area.
