Ms. Valerie Clark
Senior Project Manager
ENTRIX
3416 American River Drive, Suite A
Sacramento, CA 95864-5715

Dear Ms. Clark:

Enclosed are some materials that may help you with the identification of actions and categories for the CALFED Bay-Delta Program. These materials certainly will not lead to all the places we need to look for potential actions, but they will get you started. Enclosed you will find:

September 14 Workshop Package. This will give you the latest information on our problems and objectives.

Geographic Scope Paper. Outlines the concepts of problem geographic scope and solution geographic scope, as we discussed on August 29.

August 3 Workshop Participants. A transcription of the attendance sheet, to help give you an idea of our workshop audience.

BDOC References. A list of references used by the old BDOC Technical Advisory Committees. This may be in your binder but I wasn't sure.

Additional References. There wasn't as much on my bookshelf as I thought, but the selection will give you an idea of the obvious and less obvious places to look for actions.

Ongoing Programs. All the other efforts that are going on related to the Bay-Delta. This is a working draft that has not been released.

CALFED Bay-Delta Program Background Brochure.

Public Involvement Calendar.

Options for California Law. California Business is very interested in solving the state's water problems. Here is some recent draft material from the business community.

I encourage you to think creatively as you develop actions and categories; the old ideas haven't been adequate to solve our problems. Please feel free to call Victor Pacheco or me any time you have questions regarding this work.

Sincerely,

A handwritten signature in cursive script that reads "Rick Soehren".

Rick Soehren
