Mr. Richard G. Jenness
Laugenour and Meikle Civil Engineers
608 Court Street
Woodland, California 95695

Dear Mr. Jenness:

Thank you for providing me with project descriptions for Golden Gate Reservoir, Wilson Creek Reservoir, Cortina Creek Reservoir, and Glenn County Groundwater Recharge. I have reviewed all the material you sent and found it to be very helpful in understanding the proposals which Kempton Clark has discussed with me. I believe that projects such as these may be good candidates for integration into the larger CALFED solution, particularly if a major offstream storage project in the region becomes part of the preferred alternative. More detailed consideration of these and other projects would take place during Phase III (Project Level Planning and Environmental Documentation). Integrated water resources management, in which watershed improvements, flood detention, and groundwater recharge all work together to enhance water supplies, flood control, and environmental quality, is a key objective of the CALFED Bay-Delta Program.

If you have any questions or comments, please feel free to contact me by telephone at (916) 653-6628 or by email at sbuer@water.ca.gov.

Sincerely,
