Gentlemen:

The San Joaquin River Flood Control Association is very supportive of the U.S. Army Corps of Engineers' and the Reclamation Board's Comprehensive Flood Study of the Sacramento and San Joaquin River Basins. However, the study may take several years to complete and, therefore, we believe it is very important to move forward as soon as possible regarding the "early implementation projects" that have been identified but which must be modeled in order to be included in the Water Resources Development Act of 2000.

Attached is a copy of a letter dated November 24, 1999, that has been transmitted to the Sacramento District Office of the U.S. Army Corps of Engineers. The members of the San Joaquin River Flood Control Association and the sponsors of the study would sincerely appreciate your support in obtaining authorization of the early implementation projects.

Thank you for your consideration of providing support for this effort.

Sincerely yours,

Douglas J. Woodman
Secretary

Attachment

The Association's purpose is to improve the hydraulic capacity of the channels of the San Joaquin River in order to minimize the risk of damage to adjacent lands.
