Steve Ritchie, Acting Executive Director
CALFED Bay-Delta Program
1416 Ninth St., Suite 1155
Sacramento, CA 95814

Dear Mr. Ritchie:

I am sending this letter in regards to the CALFED Framework for Action. I am a member and/or supporter of the Merced County Farm Bureau.

CALFED must recognize California farmland as a valuable environmental resource. The CALFED plan would take nearly 250,000 acres out of production. CALFED has not given enough thought to the environmental impact of this land conversion. The plan needs to look for ways to reduce the loss of farmland.

CALFED also proposes to take local control of our ground water resources and give it to the State of California. CALFED also guarantees water supplies, reliability, and availability to water exporters -- who want to sell our water to Southern California.

Farmers can not provide habitat or feed people without reliable and affordable water. CALFED must develop water storage with adequate yield. New storage will help guarantee water for the environment in dry years, so water won't have to be taken away from farms.

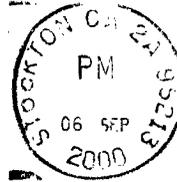

I think CALFED should hold public hearings to explain its plans before they become final. CALFED should tell us how its plan has changed and how it will affect people. CALFED should not finalize its plan until citizens have adequate opportunity to review it and comment upon it.

Sincerely,

Sincerely,

Additional Comments:

Additional storage, on or off stream, is the
only real solution to the long term water needs
in California. Without it, Agriculture will cease to
exist in California.

I am sending this letter in regards to the CALFED Framework for Action. I am a member and/or supporter of the Merced County Farm Bureau.

CALFED must recognize California farmland as a valuable environmental resource. The CALFED plan would take nearly 250,000 acres out of production. CALFED has not given enough thought to the environmental impact of this land conversion. The plan needs to look for ways to reduce the loss of farmland.

CALFED also proposes to take local control of our ground water resources and give it to the State of California. CALFED also guarantees water supplies, reliability, and availability to water exporters -- who want to sell our water to Southern California.

Farmers can not provide habitat or feed people without reliable and affordable water. CALFED must develop water storage with adequate yield. New storage will help guarantee water for the environment in dry years, so water won't have to be taken away from farms.

I think CALFED should hold public hearings to explain its plans before they become final. CALFED should tell us how its plan has changed and how it will affect people. CALFED should not finalize its plan until citizens have adequate opportunity to review it and comment upon it.

Sincerely,

William Warner

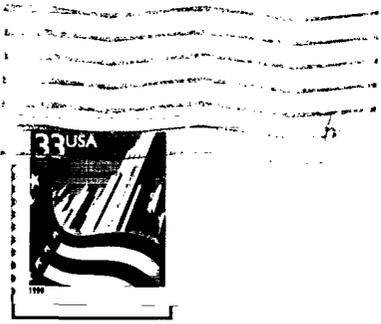

Additional Comments:

We are for more dams and storage. We lived through the floods of the 40's, 50's and 60's. These dams have provided safety as well as much recreation for California residents. We use our ground water for some of our irrigation. We don't want any State Regulation. Yes, there should be meetings before Cal-Fed regulations.

Additional Comments:

It is imperative that we keep our major focus on our water resources, farm land management, and air quality. Once any of these have been subordinated to promote permanent business and residential construction, we stand to lose the resources that feed the nation, as well as the rest of the world. In promoting industrial growth, let's not use prime farm land, nor reduce its water resources for these ventures. These resources are irreplaceable and directly affect our lifeline. We endorse public hearings so that our concerns and proposed plans are shared. Out of these hearings sound and prudent decisions can be made.

I am sending this letter in regards to the CALFED Framework for Action. I am a member and/or supporter of the Merced County Farm Bureau.

CALFED must recognize California farmland as a valuable environmental resource. The CALFED plan would take nearly 250,000 acres out of production. CALFED has not given enough thought to the environmental impact of this land conversion. The plan needs to look for ways to reduce the loss of farmland.

CALFED also proposes to take local control of our ground water resources and give it to the State of California. CALFED also guarantees water supplies, reliability, and availability to water exporters -- who want to sell our water to Southern California.

Farmers can not provide habitat or feed people without reliable and affordable water. CALFED must develop water storage with adequate yield. New storage will help guarantee water for the environment in dry years, so water won't have to be taken away from farms.

I think CALFED should hold public hearings to explain its plans before they become final. CALFED should tell us how its plan has changed and how it will affect people. CALFED should not finalize its plan until citizens have adequate opportunity to review it and comment upon it.

Sincerely,
