Dear Governor Davis;

California, of course, is greatly affected by water policy. You have to try to balance everyone's needs. We have to stop acting as if all our resources are unlimited, and take care of providing a quality environment for all of us. One important feature is protecting the quality of drinking water. People should not have to buy bottled water to try to get safe drinking water (and that doesn't always work either). We have to assure that our water supplies are not contaminated by anyone. In addition, we need to ensure that the fresh water supplies are adequate for the rivers and bays.

Please make sure that the CALFED program takes care of these problems including an emphasis on water conservation.

Thank you for helping.
