Sacramento, CA 95814

Dear Mr. Hannigan,

I would like to see a new direction through the "CALFED Bay/Delta" program that would protect and use California's water wisely for the next 50 years. Our focus should be towards a smarter future and away from the wasteful and damaging old way of building dams and canals.

I would like to see the CALFED program make sure that it invests in water efficiency for at least seven years before considering new dams or reservoirs. CALFED needs to have provisions to protect and restore our rivers, bays and fisheries by providing adequate fresh water, and also to care for land around our waterways. We need to improve water quality by enforcing pollution limits. And finally, we should stop wasting taxpayer money on studies for new dams and reservoirs.

You can assure that our future is smarter and sustainable, rather than wasteful. By doing so we can have healthy rivers, abundant wildlife, and clean water for our families, farms and business.

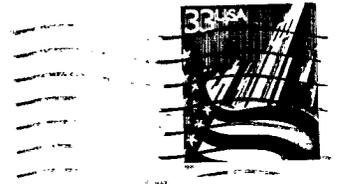

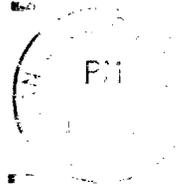

Sincerely,

Scott Steven
