KC

Since my earlier fax today, I have had a chance to briefly review the CALFED "Related Programs Report" from Lester Snow. My reading of these activities leads me to the belief they are addressing water quality in the Delta, but not drinking water quality as transported to the Met service area..

No mention is made of THMs, nor agricultural discharge from Delta islands.

Again, I believe the emphasis - from Orange County's point of view - is inadequate. I would not want to assure my constituents, as an elected official responsible for water quality, that their interests are being fully considered and dealt with.

I would welcome being disabused of my view of this matter.

Please add this to my earlier fax for distribution as noted.
