

ERPP Volume III
B. Holt --Minor Comments

The following comments are nit-pickers from some sections I read carefully. By and large, I didn't find much to nit-pick.

Volume III, page 5, col. 1, para. 1-- Unclear if "testing alternative ways of meeting objectives" means alternatives will be tested concurrently in differing, replicated locations or if it will be done sequentially.

Volume III, page 8, col. 1, para. 1 -- "Experimental management" is ambiguous. I think you mean management based on the "results of scientific experimentation".

Volume III, page 9, col. 2, para. 3 --It is unclear here if the stakeholders are to be involved in the planning or both planning and implementation.

Volume III, page 48 --- Water diversions are not included among the stressors of habitat quality and habitat extent, but it would seem they should be.

Volume III, page 10, para. 2, line 5 -- Change "invasion" to "invasions"
