Subject: issues - phase 2

Attached are the issues we recommend including on the list for discussion/resolution in the Phase II report.

Regarding the report, I will bring over the markup as we discussed - but just to give you the major highlights:

1. Discussion of Issues and Concerns - presentation in both Chapters 3 and 5 may cause confusion. I believe options include - combining into one chapter, repeating in 2 places, or reference ( in the outline box of chapter 5) back to chapter 3 for the program issues.
2. Detailed discussions on bromides and fisheries - need to be balanced - suggest either reducing the discussion on these sections or increasing the discussions on other distinguishing characteristics. We are available to help whichever way you want to go.
3. In a few key places ( you'll see in the markup) - we encourage recognition of the role that habitat may play on the fishery population abundance, thereby reducing the effects of entrainment on those populations.

See you soon!
